Okay, first off, I'm not going to claim to be an expert. I got interested in Titanic when they found it back in '85 (I was 10). At the time though, the bug bit me and I'd read anything I could get my grubby little hands on, saw practically all the movies, and have been interested in all aspects of the disaster.

A couple weeks ago I bought the book, more on a whim than anything else. The authors spend a lot of time back in the period, during the building of Olympic and Titanic. It almost gives you the impression of looking over someone's shoulder about decisions that were made while constructing and building each ship. If you've seen the Discovery Channel footage, you already know the basics, but reading about what happened during construction is still a fun read.

I'm not going to call it a conspiracy theory because in the back of the book, they list their sources, whereas most don't. If you do decide to get the book, hit me back and let me know what you think of it. I'm curious to hear from what other "Titaniacs", as they call us, thought of it.
